

Turning Centers for the Valves and Fittings Industry

The modular automation of Murata Machinery's Muratec turning machines gives you extraordinary flexibility to produce a wide variety of parts families including valves and fittings. This advanced level of flexibility enables Murata Automation to orient straight, elbow, tee, and star-shaped fittings and easily handle raw parts from bar, sawn blanks, forgings or castings.

We manufacture a wide size range of turning machines designed to accommodate everything from small fittings and valves up to the largest sizes that require 15" chucks.

MW Series MW120, MW200, MW400

Muratec's MW Series of twin-spindle CNC lathes is engineered to provide our customers in the valves and fittings industry with the latest high-quality, next-generation technology in twin-spindle turning machines for high accuracy, high productivity and customized cell automation requirements.

Accuracy and Custom Automation for Valves and Fittings

Murata Machinery USA customizes each machine with post-process gages, infeed and outfeed systems, shuttle, transfers and orientation stations that are ideal for the precision turning demanded by the valves and fittings industry.

Murata's Gaging and Automation Systems Group will vertically integrate your new or used systems with gages engineered, constructed and tested locally at Murata's Charlotte, NC, facility, with software developed by Murata. This turnkey integration ensures accuracy of close tolerances with no loss in production and full feedback for offline collection while maximizing your savings. Gages are also available in your choice of gantry-mounted, floor-mounted, or dual-station floor-mounted post-process configurations, all offering combination feature measurements, offset feedback, optional data collection, and gantry loading and unloading capabilities.

Located in Charlotte, NC, Murata Machinery USA, Inc. is a subsidiary of Murata Machinery Ltd. of Kyoto, Japan. With *Reliability By Design* built into every machine, Murata produces durable turning machines engineered and constructed using the legendary Warner Swasey platform.
